

# Why You Should Keep Your Passwords Safe

When you are using websites on the internet that need passwords, you should always create a strong password so no-one can hack into your account(s). You should NEVER tell anyone your private information/passwords apart from a trusted adult, because:

- \*hackers will change your personal information on your account(s)
- \*they may spend money on online shopping sites
- \*they might send nasty messages

You should tell a trusted adult your password so if anything goes wrong, they can help. If anything does go wrong, TELL an adult.
